How much does a home solar system cost?

According to studies by the U.S. Department of Energy, the all-in cost of a home solar panel system is between \$2.74 to \$3.30 per watt. <sup>1,2,12</sup> This figure includes the solar panels, the installation, and other expenses. Using these numbers, an average-sized 8-kilowatt residential solar system would cost between \$21,900 – \$26,400.

How much does a solar panel installation cost?

Expect to spend between \$1,000 to \$2,000 depending on system size. The average cost of solar panel installation in the U.S. usually ranges from \$10,000 to \$25,000 before applying any incentives or rebates. Factors that impact this cost include panel type, roof structure, local labor rates, and permit fees.

Are solar installations cheap?

Solar installations aren't cheap, but the actual equipment is a relatively small part of the total cost. It's only 35% of your total installation cost, according to the US Department of Energy. Soft costs, also known as the hidden costs of installing solar, are nonhardware costs, and they make up 65% of your total solar costs, according to the DOE.

How much does a solar energy project cost?

Always ask your installer for a detailed quote to avoid surprises. A large-scale solar energy project cost can run over \$100,000. These projects involve land prep, panel procurement, storage systems, and labor—but benefit from commercial tax credits and long-term ROI.
