# How much power can a 5000w inverter carry

## Overview

---

What appliances can a 5000 watts inverter run?

A 5000 watts inverter can power several heavy electronic appliances. You can run Microwave, Coffee maker, refrigerator, toaster, computer, TV, Stereo, and Heater, etc. The watts requirement of each household appliance should be calculated before connecting them to the battery.

How do I power a 5000W inverter?

To power a 5000W inverter, you have to consider more than just the number of batteries. The battery capacity, the inverter voltage input and how long you need to use the inverter are important. Large inverters are used as emergency power backup, so determine how many hours the system will run.

How many appliances can a 5000W inverter power?

A 5000W inverter can power more than 5 household appliances without an additional power supply. However, some appliances may require more power, so you may need to disconnect some appliances while using others and then connect the required equipment to start.

How many batteries do you need for a 5000W inverter?

Since partial batteries are not possible, you would need at least 3 batteries of 48V each to supply a 5000W inverter running at 110V. For a 240V system, the inverter draws 20.83 amps. Using the same formula, with a 20A discharge current: Number of batteries =  $20.83 \text{ amps} / 20 \text{ amps} \approx 1.04$  batteries
