# How to calibrate the new energy battery cabinet

## Overview

---

How to calibrate the battery?

To calibrate the battery, follow these four steps: fully charge the battery, discharge or drain the battery, recharge the battery, and then run the battery test. Calibrating the battery improves the accuracy of the battery gauge software.

How to protect a lithium battery energy storage cabinet?

At the same time, setting the charging and discharging parameters, configuring the safety and protection settings, and protecting the lithium battery energy storage cabinet from potential dangers such as overcurrent, overvoltage, and overtemperature are necessary.

Do lithium-ion batteries require calibration?

Lithium-ion batteries need to be calibrated periodically to maintain their accuracy and prolong their lifespan. To calibrate, a battery is charged to 100% capacity and then fully discharged until it reaches 0%.

How often should you calibrate a battery?

For older devices, you should calibrate the battery every 3-6 months, depending on use and battery performance. You can also download apps that monitor your battery's health and provide alerts when calibration is needed.
