How to connect lithium batteries in base station battery cabinet

LiFePO₄ Battery, safety

Wide temperature: -20~55°C

Modular design, easy to expand

The heating function is optional

Intelligent BMS

Cycle Life: ≥ 6000

Warranty: 10 years

Overview

How to protect a lithium battery energy storage cabinet?

At the same time, setting the charging and discharging parameters, configuring the safety and protection settings, and protecting the lithium battery energy storage cabinet from potential dangers such as overcurrent, overvoltage, and overtemperature are necessary.

How do you level a battery cabinet?

Remove the side panels that are adjacent to the other battery cabinets. Push the right-most battery cabinet into position. For seismic anchoring, ensure that the rear seismic bracket connects to the rear anchors. Lower the levelling feet until they connect with the floor - use a bubble-leveler to ensure that the cabinet is level.

How do you store lithium ion batteries in a room?

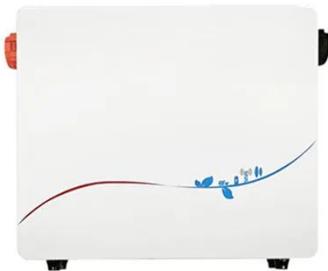

Racks or trolleys can be used to allow movement of batteries, while walkways between battery stands should remain unobstructed. If your room will house both lead-acid and lithium-ion batteries, it's good practice to physically separate these systems, especially considering their different safety and environmental requirements.

Where should a lithium ion battery be installed?

Intake vents should be located near the floor, while exhaust fans should be installed near the ceiling to remove lighter-than-air hydrogen effectively. For lithium-ion battery systems, thermal management is more important than gas removal. These batteries perform best in ambient temperatures between 15°C and 25°C.
