How do I Pair my solar panels with a battery storage system?

Let's break it down. Here's how to pair your solar panels with a battery storage system, step by step. Look at your utility bills. Figure out your average daily usage (in kWh). Consider any future appliances, EVs, or lifestyle changes. You want to produce more than you use. If your home uses 30 kWh/day, aim for 35–40 kWh/day from solar.

What is energy storage?

Energy storage is a system that can help more effectively integrate solar into the energy landscape. Sometimes it is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone.

How do solar panels & battery storage work?

Solar panels help you generate power. Battery storage helps you keep that power for use when the sun isn't shining. The combo?

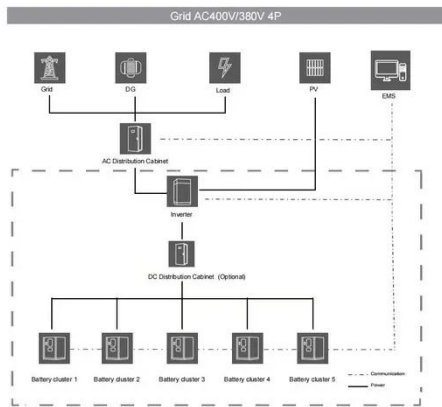

A 24/7 personal energy ecosystem. Let's start at square one. How do solar panels work?

They absorb sunlight and turn it into electricity (called DC power). An inverter then converts it into AC power for your home.

Can solar energy be used for energy storage?

Solar power can be used to create new fuels that can be stored and later used to provide energy. Existing compressed air energy storage systems often use the released air as part of a natural gas power cycle to produce electricity.
