Huawei Slovakia mobile power storage vehicle

Overview

Will Huawei's new battery improve energy storage?

In an effort to improve its energy storage, Huawei has submitted a patent application for a battery with a 3,000-kilometre range and a five-minute charging time. Compared to traditional lithium-ion cells, the new sulfide-based solid-state battery will have energy densities between 400 and 500 Wh/kg, or two to three times higher.

Does Huawei have a sulfide battery?

Huawei has intensified its ambitions in advanced energy storage by patenting a sulfide-based solid-state battery capable of achieving driving ranges of up to 3,000 kilometres and ultra-fast charging in just five minutes.

Is Huawei launching a solid-state battery?

Solid-state battery efforts might gain a significant boost from technology giant Huawei. The company patented a solid-state battery with an energy density between 400 Wh/kg and 500 Wh/kg. The battery uses a sulfide-based electrolyte and a lithium-metal anode, promising better ionic conductivity compared to other solid-state battery cells.

What is Huawei's solid-state battery patent?

Huawei's solid-state battery patent comes at a time when global automakers and battery manufacturers—such as Toyota, CATL, and Samsung—are racing to achieve similar breakthroughs, with commercial rollout of solid-state batteries expected within the next 2–5 years.
