

## BLINK SOLAR

# India rechargeable solar container battery

## Overview

---

What is the future of solar battery storage in India?

The solar battery storage market in India is expected to develop rapidly by 2025 due to lowering prices, strong government backing, and rising energy security demands. As the country moves toward its ambitious goal of 500 GW of green energy by 2030, the market is expected to hit \$10 billion annually.

How much battery energy storage capacity is available in India?

Between 2022 and May 2025, India auctioned approximately 12.8GWh of battery energy storage system (BESS) capacity for both hybrid and standalone applications. However, only about 219MWh of BESS capacity is reported to be operational, leaving a large pipeline of projects under construction.

Is solar battery storage a game-changing prospect for Indian families in 2025?

Solar battery storage provides a game-changing prospect for Indian families in 2025. Realistic battery prices of around ₹30,000 per kWh, full government support through the PM Surya Ghar Yojana, and a rapidly growing market for energy storage at 41.70% yearly all make it easier for many people to start using solar battery systems.

Why is battery storage a growing trend in India?

By Debmalya Sen, President, India Energy Storage Alliance The global rise of battery storage has often been associated with the uptake of hybrid solar projects incorporating battery components.
