Install a truckload of solar panels

ESS

Overview

Can solar panels fit in a truckload?

And while residential solar panels typically fit into a conventional truckload, utility-scale solar panels could qualify as oversized shipments depending on the dimensions. Heavy-haul and oversized loads require additional permits, optimized routing, and even specialized equipment like flatbed trailers.

How to transport photovoltaic solar panels?

The transport of solar panels and all the components associated with this type of renewable energy can be done by road by truck or rail, by air or by container ship. What issues need to be considered when transporting photovoltaic solar panels?

Suitable packaging: The first step is to ensure proper packaging for the solar panels.

How do I install solar panels on my van?

Once the feet are attached it is time to install the solar panels on the roof of your van. This will allow you to finalise the position of the panels and mark on the roof where to apply the adhesive. Note: you will want to position the feet on the high parts of the ridges. Simply apply good quality masking tape 5-10mm from the edge of the feet.

How are solar panels packaged?

Solar panels are palletized and carefully packaged using protective materials to avoid damage during both domestic and international transit. If the load is over-dimensional or overweight, it may not fit in a conventional van and could require the use of a flatbed trailer.

Install a truckload of solar panels

Shipping Solar Panels Freight SideKick
