Install solar panels in new houses

Overview

How to install solar panels?

The first step in solar panel installation is fixing the mounting structure to support the panels. The whole mounting structure must be tilted and have an angle between 15 to 20 degrees to have maximum sunlight exposure. For countries in the Northern Hemisphere, the best direction to face solar panels is south because it gets maximum sunlight.

How long does it take to install solar panels?

Getting solar panels installed isn't as hard as it seems. The steps follow a pretty simple order: check the home, pick a good installer, design the system, get approvals, install the panels, and start using solar power. Each part has its own timing, but most systems are up and running within a few weeks to a couple of months.

Should I install a solar power system?

Your solar power system can be: For urban homeowners, an on-grid solar panel for home system is often the most cost-effective. Professional installation ensures long-term safety and performance. A certified installer will: Always request an AMC (Annual Maintenance Contract) and ensure post-installation support.

Can you put solar panels on a house?

Getting solar panels put on a house might sound tricky, but it's actually not that hard once each part is explained. Solar power is a clean way to make electricity using the sun, and more people are starting to see why it's a smart move.
