Installation and commissioning of lead-acid batteries for solar container communication stations

Overview

What are the standards for sizing large lead acid storage batteries?

IEEE Standard 485-1997: "Recommended Practice for Sizing Large Lead Acid Storage Batteries for Generating Stations." IEEE Standard 1187-2002: "Recommended Practice for Installation Design and Installation of Valve Regulated Lead-Acid Storage Batteries for Stationary Applications".

What is a Recommended Practice for photovoltaic storage batteries?

Scope: This recommended practice provides design considerations and procedures for storage, location, mounting, ventilation, assembly, and maintenance of lead-acid storage batteries for photovoltaic power systems. Safety precautions and instrumentation considerations are also included.

Why do lead-acid batteries need a commissioning charge?

Basically, for all lead-acid batteries, the rate of self discharge increases with storage temperature. The total charge lost is a function of the time in storage at a given temperature. The primary purpose of the commissioning charge is to make sure a new battery is fully charged before it is placed into operational service.

What is a lead-acid battery maintenance practice?

Purpose: This recommended practice is meant to assist lead-acid battery users to properly store, install, and maintain lead-acid batteries used in residential, commercial, and industrial photovoltaic systems.
