How does a solar inverter work?

Most homes and appliances run on alternating current (AC). This is where the solar inverter comes in. Put simply, a solar inverter converts the DC electricity generated by your solar panels into AC electricity that can be used in your household or fed back into the power grid. Without it, all that solar energy would be essentially unusable.

Why do you need a solar inverter?

And in the case of hybrid or off-grid systems, solar inverters manage the flow of energy between your solar panels, battery storage, and household loads. In essence, they ensure balance. They optimize performance. They keep your energy reliable, even when the sun isn't shining at full strength.
