Introduction to solar container communication station Gel Batteries

Overview

Can a gel battery be used on a solar system?

Gel batteries, like AGM batteries, can be particularly useful for small, off-grid solar systems. For example, a remote cabin with low energy demand and a small system on the roof may be the perfect candidate for a gel or AGM battery bank.

What are gel batteries used for?

Gel batteries are used in vehicles, boats, and mobile power systems due to their ability to resist vibrations and shock, as well as their ability to operate in various weather conditions. Gel batteries use an electrolyte in gel form instead of liquid, making them safe, low self-discharge, and suitable for solar energy.

How does a gel battery work?

A gel battery works by using a gel electrolyte instead of a liquid electrolyte, as in conventional lead-acid batteries. The gel is a viscous material that contains sulfuric acid, water and silica, and acts as an ion conductor. During charging, an electrical current is applied to the battery, causing a chemical reaction in the gel.

Why should you choose a gel battery?

Gel batteries are sealed and airtight, significantly reducing the risk of corrosive acid leaks. This makes them safer and easier to handle, without the need for regular maintenance, such as adding distilled water, which is common with conventional lead-acid batteries. No maintenance reduces costs over the life of the battery. 3. Vibration resistant
