Is smart solar an inverter

Overview

Do solar panels need a smart inverter?

While some solar panel installations use a traditional inverter, though, others use a smart inverter. A smart inverter is a type of solar panel inverter that uses “smart” technology to optimize its performance and operations. Like all inverters, they are designed primarily to convert DC output into AC.

What does a Home Smart Energy solar inverter do?

Home Smart Energy solar inverters convert the incoming direct current into Alternating current. They are efficient in transforming the 36-V DC into 230V-AC /50HZ through their output filters. The system has a high level of tolerance for low input voltages when the sun light is low.
