

## **BLINK SOLAR**

# **Is the inverter for indoor or outdoor use**

## Overview

---

Should solar inverters be indoor or outdoor?

Outdoor installation of solar inverters is more common than indoor installation primarily because it saves space, improves energy transfer efficiency, and lowers installation costs.

Can inverters be installed outside?

As a rule, inverters designed for outdoor use may be installed either outdoors or indoors, however indoor inverters can only be installed indoors. The great majority of grid-tied or string inverters available today are designed for outdoor installation.

Why should you install an outdoor inverter?

**Agricultural and Rural Settings:** In agricultural or rural settings where outdoor space is abundant, outdoor installation offers a practical and cost-effective solution. Inverters can be mounted on poles, walls, or ground-mounted racks, optimizing space utilization and simplifying installation and maintenance.

What is a solar inverter?

A solar inverter is a crucial component of a solar panel system. It is used to convert the DC power (produced by the solar panels) to AC power that you can use to run various electric appliances at home. There are different types of solar inverters – string inverter, micro-inverter, and power optimizers.
