# **Liberia off-grid solar power generation system**

Solar

## Overview

---

How can Liberia improve energy security?

One strategy is to diversify the energy mix by increasing the share of domestic renewable energy sources, such as solar and wind power, for electricity generation. By harnessing these indigenous and sustainable energy resources, Liberia can decrease its reliance on imported fuels and enhance its energy security.

How will Liberia's energy policy change?

“Liberia is committed to increasing its share of renewable energy to 75% from the current 67%, while the generation base is expected to increase by 150%. “Liberia aims to mobilise \$70 million of private capital for utility-scale solar and another \$80 to \$100 million for [distributed renewable energy] and clean cooking.”.

How many solar-based mini-grids are there in Liberia?

The aim is to develop up to 30 solar-based mini-grids in Liberia, relying on local materials and workers for the construction. It is estimated that once these are operational, the mini-grids could provide more than 4,400 residential, commercial and institutional energy service connections.

Does Liberia have an off-grid solar market?

It is part of a series of briefing notes that provide a high-level overview of the status of countries' off-grid solar markets, as well as relevant policies and programs<sup>1</sup>. Liberia plans to reach electricity coverage of at least 70 percent of the population in Monrovia, and 35 percent nationwide by 2025.
