Lithuania New Energy solar Site Energy

Overview

Will European energy sell Lithuanian wind & solar project to Energix?

Danish renewable energy firm European Energy A/S has agreed to sell a Lithuanian wind and solar project with a combined capacity of up to 470 MW to Israeli power producer Energix Renewable Energies Ltd (TLV:ENRG). Image by European Energy. The deal is expected to be completed later in 2025, European Energy said.

Does Lithuania need a new energy system?

Lithuania imports a large share of its electricity needs, while bioenergy is taking the lead in domestic energy supply. By 2030, Lithuania wants to reduce its electricity imports by half and produce 70% of its electricity needs from domestic sources. It plans to complete its synchronisation with the continental European power system by early 2025.

Can Lithuania achieve 100% renewable electricity by 2050?

In support of the 100% renewable electricity target by 2050, the government is encouraged to design a long-term renewable energy strategy for Lithuania, which would analyse the electrification of end-uses, notably heat, and an assessment of system integration needs across sectors.

Can Lithuania generate 45% of its electricity from renewable sources?

Lithuania, in particular, aims to generate 45% of its electricity from renewable sources by 2030 as part of its energy independence strategy. Currently, around 50% of the country's electricity consumption is met through imports.
