Overview

What is the Maldives solar project?

The Maldives solar project is a 36 MW solar power project and 50 MWh of battery energy storage solutions development across various islands in the Maldives. It also includes grid modernization for the integration of variable renewable energy with the grid, which will be financed under the proposed AIIB loan.

Why solar PV with storage in Maldives?

Solar PV with storage has proven suitable and competitive for Maldives' high penetration of renewable energy (POISED type B projects), with an average fuel savings of 25%. The concept design of hybrid systems (efficient diesel generators + solar PV plants + energy storage) has resulted in success for Maldives.

How much solar energy does the Maldives receive?

Maldives, located in the Equator, receives abundant solar energy. Specifically, it receives about 400 Million MW of solar energy per annum.

Is Maldives ready for hybrid solar PV-diesel?

Maldives aims to transform the energy systems of at least 160 islands from diesel-based to hybrid solar PV-diesel systems through the Preparing Outer Islands for Sustainable Energy Development (POISED) project, which was established in 2014 with the support of the Asian Development Bank (ADB). The project focuses on the implementation of hybrid solar PV-diesel systems.
