Nuku alofa s new uninterruptible power supply plant

Overview

What is an uninterruptible power supply?

Uninterruptible power supplies are used in computer installations where power outages can mean loss of stored data (for example, in on-line reservations systems). Lower-power systems are provided to maintain continuous power to critical instrumentation (for example, a boiler-flame detector in a power plant).

What is an uninterrupted power supply (UPS) system?

Uninterruptible power supply (UPS) systems are defined as systems that provide uninterrupted, reliable, and high-quality power for sensitive loads, such as medical facilities, data storage, and telecommunications.

What is Saad mekhilef uninterruptible power supply (UPS) system?

Saad Mekhilef Uninterruptible power supply (UPS) system provides clean, conditioned, and uninterruptible power to the sensitive loads such as airlines computers, data centres, communication systems, and medicals support systems in hospitals etc.

How do uninterruptible power supplies (UPS) mitigate voltage sags?

Uninterruptible power supplies (UPS) mitigate voltage sags by supplying the load using stored energy. Upon detection of a voltage sag, the load is transferred from the mains supply to the UPS.
