# Peak-shifting energy storage with large capacity for home use

✓ IP65/IP55 OUTDOOR CABINET

✓ ALUMINUM

✓ OUTDOOR ENERGY STORAGE CABINET

✓ OUTDOOR EQUIPMENT CABINET

## Overview

---

Does energy storage make peak shaving easy?

This guide explains how energy storage systems make peak shaving easy for both homes and businesses—plus real-world tips from ACE Battery. In an era of rising electricity costs, unpredictable peak demand charges, and growing pressure for energy independence, peak shaving energy storage is no longer a luxury—it's a necessity.

Is peak shaving a future-ready energy storage system?

The energy landscape is evolving fast. With dynamic pricing, virtual power plants (VPPs), and increasing renewable penetration, peak shaving is set to become even more essential. Future-ready energy storage systems will not just manage peaks—they'll: Choosing a partner with scalable, flexible, and certified systems is crucial.

What is the peak year for energy storage?

The peak year for the maximum newly added power capacity of energy storage differs under different scenarios (Fig. 7 (a)). Under the BAU, H-B-Ma, H-S-Ma, L-S-Ma, and L-S-Mi scenarios, the new power capacity in 2035 will be the largest, ranging from 47.2 GW to 73.6 GW.

How can energy storage reduce load peak-to-Valley difference?

Therefore, minimizing the load peak-to-valley difference after energy storage, peak-shaving, and valley-filling can utilize the role of energy storage in load smoothing and obtain an optimal configuration under a high-quality power supply that is in line with real-world scenarios.
