Port of Spain Communications 5G base station 6 25MWh

Overview

What frequencies does Valenciaport 5G use?

Valenciaport's 5G network will use n40 frequencies, frequencies regulated by the public administration, thus ensuring the privacy of the network in the port area and allowing for customised security, controlling the devices that are connected.

What will 5G mean for the port of València?

According to the director of the Port Authority of València (PAV), Enrique Belda, '5G will allow us to configure the technological future of the Port of València, a future that will provide advanced connectivity for the improvement of innovation and the definitive digital transformation'.

Will 5G SA become a smart port?

For Javier Gallego, head of Technologies at the PAV, 'our 5G SA network is one of the fundamental pillars to achieve the goal of becoming a definitive smart Port, based on two pillars: security and mobility'. The solution will integrate market-leading technologies and solutions with a 5G private network core in its Stand-Alone (SA) mode.

What is a 5G sa solution?

The completely private and dedicated 5G SA solution involves the deployment of its own network for exclusive use, which means total control of all decisions relating to this infrastructure in an independent and unilateral manner.
