Price and application of energy storage in New York power grid

Overview

Can long-duration energy storage help New York achieve a zero-carbon grid?

This analysis supplements prior studies and evaluates the extent to which diverse types of emerging long-duration energy storage (LDES) and multi-day energy storage (MDS) technologies could serve as DEFRRs and help New York achieve a reliable, affordable, zero-carbon grid.

How big is energy storage in New York State?

Nonetheless, energy storage accounts for only about 2% of total U.S. energy capacity.³⁶ FOTM systems have driven the bulk of this growth in installed ESS capacity. Under the Climate Leadership and Community Protection Act (CLCPA) passed in 2019, New York State (the State) established an ambitious goal for energy storage of 3 gigawatts by 2030.

How much do energy storage incentives cost in New York?

These incentives decline each calendar year and are set at \$90 per kWh for year 2021. Bulk energy storage incentives are applicable to ESS projects between 5 and 20 MW in capacity and are available through the New York State Energy Research and Development Authority (NYSERDA).

Can energy storage reduce New York's climate goals?

Emerging long-duration and multi-day energy storage technologies can lower the annualized system costs of achieving New York's 2030 climate goals by 6 percent (\$0.4 billion/year) compared to scenarios in which lithium-ion batteries are the only available storage technology.
