Pyongyang Cadmium Telluride solar Glass

Overview

What is cadmium telluride (CdTe) photovoltaic glass?

Cadmium Telluride (CdTe) photovoltaic glass is a type of solar photovoltaic glass that incorporates thin-film photovoltaic technology based on the semiconductor compound cadmium telluride.

What are the advantages of cadmium telluride (CdTe) thin film solar cells?

1. Introduction Cadmium Telluride (CdTe) thin film solar cells have many advantages, including a low-temperature coefficient ($-0.25\ \%/^{\circ}\text{C}$), excellent performance under weak light conditions, high absorption coefficient ($105\ \text{cm}^{-1}$), and stability in high-temperature environments.

Are polyimide solar cells better than glass?

The solar cells achieved an efficiency of 11 %. However, polyimide (PI) is less thermally stable compared to glass and may exhibit thermal expansion, which can cause delamination and degradation of the device. PI is also more susceptible to moisture and oxygen, which can degrade the effectiveness of the flexible CdTe solar cells . Fig. 4.
