Rainproof canopy solar system

Overview

What is a Lumos solar canopy?

Lumos Solar Canopies are all about enhancing spaces with sustainable design. The Lumos product catalog contains the right solar canopy for your design: from our impressive solar panel shade structures and prefabricated solar pergolas to our award-winning solar walkways and stylish solar sculptures.

What is a solar canopy?

A solar canopy is a steel structure with solar panels mounted on top, typically installed above parking lots or open areas. It generates clean electricity while offering shade and weather protection for vehicles or people underneath. You might already be familiar with rooftop solar.

What is the difference between Lumos solar awnings & canopies?

In considering your solar panel shade structure designs, please note: Lumos canopies are separate structures, while our awnings are attached to buildings by support posts. Our walkways can either be independent or attached depending on your unique needs. Lumos Solar Canopies are all about enhancing spaces with sustainable design.

Are solar canopies a good investment?

Solar canopies aren't just energy assets—they're part of the environment your clients, employees, or visitors see and use every day. A well-designed canopy can elevate the entire space. But without careful planning, it can easily turn into a bulky, intrusive structure that no one wants to stand under.
