# Roman Solar Ecosystem Design

## Overview

---

What is solar architecture in Rome?

Solar Architecture in Rome: The Refurbishment of Historic Buildings with Active Solar Technologies. In: Sayigh, A. (eds) Mediterranean Architecture and the Green-Digital Transition. Innovative Renewable Energy.

Did the Romans use solar energy for heating?

The Romans are deserving of high praise for their use of solar energy, particularly in the design of their baths. Thatcher may have underestimated the Romans' capabilities in radiant heating, but their use of solar energy is still noteworthy according to modern standards and technology 2,000 years later.

What if the Romans didn't solve their environmental problems?

The Romans wouldn't have lasted more than a few decades if they hadn't worked out some solutions to their environmental problems — problems that continue to plague civilization today. They adopted, adapted, invented and built their way through ecological roadblocks and became one of the world's great empires.

Why did Roman baths have large windows?

Roman baths have large south-facing windows to intercept the sun's beam radiation most of the day, particularly from early afternoon to near sunset, which were the most popular hours for Romans to bathe.

## Roman Solar Ecosystem Design

## Environmental Choices the Romans Made

Treated Water and Air as Shared Resources  
Practiced Vegetarianism  
Used

48V 100Ah

Passive Solar TechnologyIt was expensive to heat a home in ancient Rome -- wood is a bulky fuel that wasn't readily available in much of the Roman Empire. The Romans burned coal, but that was also expensive -- and dirty. It was the ancient Greeks who first developed the passive solar concepts that the Romans adopted, but the Romans used their engineering and design skills t See more on treehugger Author: Shea GuntherResearchGate
