Saint Lucia Outdoor Communication Power Self- service BESS

Overview

What are the Bess auxiliary power and energy requirements?

BESS auxiliary power and energy requirements. Estimated auxiliary consumption during idling, charging and discharging. Maximum Short Circuit Capacity at the DC Bus in kA from positive to negative terminal. Description of the BESS maintenance requirements including anticipated equipment replacement.

Can a Bess support a DC BUS?

The BESS must be capable of supporting the DC Bus when the inverter requests a 0-100% power draw that could occur with a rise time of 100 ms. The Contractor shall indicate, both graphically and with a table, the ramp rate capacity of the battery in charging and discharging mode.

What is a Bess battery PCs specification?

This Specification provides the technical requirements for the BESS. The corresponding Battery PCS requirements are the subject of a separate Technical Specification, Schedule B - Power Conversion System (PCS) Specification. 1.1.1.4 The work called for is subject to the purchase order documents.

How much power can a Bess system be charged & discharged?

4.1.1.7 In all BESS operating modes, the system shall be capable of being charged or discharged at power levels anywhere from 0 to 100% of the rated charge and discharge power, respectively. 4.1.1.8 The Contractor shall advise if there is any de-rating of the discharge capabilities below a certain SOC.
