Singapore MRT station uses 60kWh photovoltaic folding container

Overview

Where can solar panels be installed in Singapore?

The Land Transport Authority (LTA) has contracted Sunseap Leasing to install additional solar panels at mass rapid transit (MRT) stations, train and bus depots across Singapore. Some of the key locations include the Buona Vista MRT station, Dhoby Ghaut MRT station, Sengkang Depot and Tuas Bus Terminal.

How much solar power does Buona Vista MRT provide?

This includes Buona Vista MRT station, Dhoby Ghaut MRT station, Sengkang Depot and Tuas Bus Terminal, among others. The solar panels will provide solar capacity of up to 7.9 megawatt peak (MWp) or up to 8.5 gigawatt-hours a year, equivalent to supporting the charging needs of up to 113 single-deck electric buses for a year.

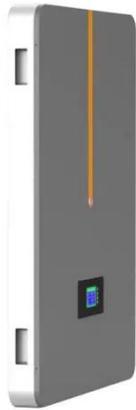

How to keep MRT stations Cool in Singapore?

One of the biggest challenges is to keep MRT stations cool in Singapore's humid climate—and to not use too much energy to do it! For our stations located underground, this is done by installing platform screen doors and using an energy-efficient system design to reduce air-conditioning energy consumption.

How do MRT stations save energy?

For stations located above ground, passive cooling strategies are employed. Some tap on High-Volume, Low-Speed (HVLS) fans and others leverage the greenery woven into the building façade to reduce heat. Where possible, MRT stations are also designed to tap on natural ventilation and sunlight to save energy.
