Single crystal shingled semi-flexible solar panel

Overview

Lightweight semi-flexible solar panels with ETFE coating, 7-layer lamination, ideal for boats, RVs & 4WDs. Durable, low wind resistance & high efficiency. What is a shingled solar panel?

With the shingled cell technology, this 110W solar panel offers pure cell exposure to sunlight with no interruptions. By eliminating the need for ribbons, busbars, and soldering processes, the shingled flexible solar panel offers 15~20% more output than traditional panels, significantly reducing energy losses and hot spots.

What is a semi-flexible solar panel?

Recently updated, our new Semi-Flexible solar panel range is the perfect versatile energy companion for mobile applications. The thin profile provides low wind resistance and its extremely light weight makes it well-suited to be used on yachts, boats, RVs, 4wd vehicles etc.

What is a shingled solar module?

With the shingled layout, there are fewer gaps between the individual solar cells so more of the sunlight that is incident on the module can be absorbed. Instead of using external connectors to transport the current from one cell to the next, the area of the cell overlap is used as an electrical connector.

Why should you choose Atem power shingled flexible solar panels?

With ATEM POWER's shingled flexible solar panels, you don't have to compromise on flexibility, efficiency, or style. Our shingled cell technology is tailored to meet the needs of solar power users, delivering unbeatable performance and sleek aesthetics.
