Small container stations from Greece to Rong Energy

Overview

How has Greece increased its LNG import capacity?

Greece, which typically consumes about 6-7 billion cubic meters of gas a year, has increased capacity for LNG imports through the upgrade of its Revithoussa LNG terminal and the recently completed Alexandroupoli floating storage regassification unit (FSRU).

What is Alexandroupolis LNG terminal?

The Alexandroupolis LNG Terminal also consists of a subsea and onshore natural gas pipeline. Through the National Natural Gas Transmission System it will deliver natural gas to Greece, Bulgaria, Romania, North Macedonia, Serbia, Moldova and Ukraine in the east, as well as Hungary and Slovakia in the west, Gastrade added.

What infrastructure upgrades are coming to Greece?

Liquefied Natural Gas (LNG) Infrastructure upgrades include the Revithoussa LNG Terminal, which facilitates 30-40% of Greece's total gas needs. The Alexandroupoli FSRU, operated by Gastrade, started commercial operations in October 2024 and increases Greece's import capacity considerably.

Who is developing the Argo FSRU project with ExxonMobil LNG?

MedGas will develop the project with ExxonMobil LNG after being awarded an independent natural gas system license from Greece's Regulatory Authority for Energy in February 2022. The MedGas company was established in September 2020 to develop the Argo FSRU project.
