## Overview

---

What is a sodium ion solar battery?

Most solar batteries currently rely on lithium, but sodium, an alkali metal, delivers a cleaner and more secure option. Sodium-ion batteries provide various benefits, including longer lifespan, affordability, and complete recyclability. Made from salt sourced from the ocean, the production process is less invasive and uses abundant resources.

Is sodium-ion battery suitable for solar energy storage?

The sodium-ion battery developed in this work is suitable for solar energy storage because it has advantages of long cycle life, low cost, and materials abundance over lithium-ion batteries. It also has the feasibility for large-scale production using the existing infrastructure of lithium-ion batteries.

What is the difference between lithium & sodium solar batteries?

Currently, most solar batteries are made from lithium, whereas sodium, an alkali metal, offers a safer, cleaner, and more secure solution for electrical energy storage cells and modules.

What are the benefits of sodium ion batteries?

Sodium-ion batteries provide various benefits, including longer lifespan, affordability, and complete recyclability. Made from salt sourced from the ocean, the production process is less invasive and uses abundant resources. This innovation uses Australian-made compounds from recycled plastics, bio-waste, and sodium derived from water desalination.
