

## BLINK SOLAR

# Solar 6 kW control system

Features and applications  
Please refer to the manual

More information

## Overview

---

What is a 6kW solar power system?

6kW solar power systems are becoming increasingly popular with medium to large families as they have the capacity to cover bigger than average power bills and are better value for money than 5kW solar power systems.

How much does a 6 kW solar panel cost?

A 6 kW solar panel system costs \$15,900 in 2025 before incentives. A 6 kW solar panel system produces about 8,711 kWh of electricity annually, but the exact amount depends on where you live and how much sun you get. DIYing a 6 kW solar panel system usually isn't your best bet: You're much better off hiring a professional solar company.

How much energy does a 6 kW solar system generate?

A 6 kW solar panel system generates approximately 8,711 kWh of electricity each year. That's enough to keep 159 TVs running, power 6 refrigerators, or meet the energy needs of a small household (the average U.S. shopper on EnergySage needs about 12 kW of solar). But what else could it do?

.

How much space does a 6kW Solar System need?

A 6kW solar kit from GoGreenSolar requires about 345 square feet of space. Solar panels with string converters need to be grouped together and facing the same direction. You'll want to consider whether this option is the right choice for you or if you'd be best served by solar panels with microinverters.
