# Solar Direct Supply Inverter

## Overview

What is a solar inverter?

**Solar Inverter - Definition:** Every PV system requires at least one inverter. While the utility grid supplies alternating current (AC) and most domestic appliances and machines also run on alternating current, the PV modules on your roof generate direct current (DC). So, this first has to be converted into alternating current (AC) for everyday use.

What is a direct drive inverter?

Direct Drive Inverters convert power from low voltage isolated DC power sources to high voltage AC suitable from mains power. The inverters are high power with low harmonics making them ideal for UPS and on or off-grid application. Direct Drive technology carries significant advantages over traditional inverters including:.

What are the advantages of direct drive inverters?

Direct Drive technology carries significant advantages over traditional inverters including: Ultra low cost: power conversion below 10c/W. Record efficiency: <0.6% losses for storage, anticipated <1% Solar PV (incl. MPPT). Smaller: Just 0.4cc/W for storage. Sonex's 5kW inverter takes up about 2L of space.

What are the different types of solar inverters?

Solar inverters are also available in different varieties, e.g. as solar inverter 10kw or solar inverter 6kw. The following inverters are those used most frequently: These micro inverters for solar panels are connected directly to the PV modules: you will find a PV inverter on every PV module.
