# Solar System Car

## Overview

---

What is a solar car?

A solar car represents a promising frontier in sustainable transportation, harnessing the power of the sun to propel vehicles with minimal environmental impact. These innovative vehicles utilize photovoltaic panels to convert sunlight into electricity, offering a renewable alternative to traditional gasoline-powered cars.

How does a solar car work?

Through the integration of photovoltaic cells within solar panels, sunlight is efficiently converted into electrical energy, serving as the primary power source for the vehicle. This electricity powers an electric motor, converting it into mechanical power to drive the car forward.

What are some solar-powered cars?

Another interesting solar-powered car is the Sion, built by Sono Motors. The company claims this is the first commercially-available hybrid solar-electric vehicle. It has a range of up to 160 miles (255 kilometers) and can charge itself using solar power. It is equipped with 248 solar cells that are integrated into its body. The Solo Sion.

Are solar-powered cars a real-world solution?

Solar-powered cars are transitioning from experimental concepts to real-world solutions, thanks to breakthroughs in lightweight materials, efficient solar cells, and integrated energy systems.
