## Overview

---

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

What is a home-based energy storage system (PCS)?

Smaller PCS units, usually in the range of a few kW to around 15 kW, are common in home-based energy storage solutions. These systems pair effectively with rooftop solar panels: the PCS inverts DC power from solar modules to AC for household use, stores any surplus in the battery, and provides backup power in case of outages.

What is a PCs energy storage system?

1. Large-Scale Energy Storage: In utility-scale installations, PCS solutions often operate in the megawatt (MW) range or higher. These systems balance grid supply and demand, stabilize voltage and frequency, and smooth out the intermittent nature of wind and solar farms.

What energy storage container solutions does SCU offer?

SCU provides 500kwh to 2mwh energy storage container solutions. Power up your business with reliable energy solutions. Say goodbye to high energy costs and hello to smarter solutions with us.
