Solar container lithium battery pack temperature rises

Overview

Why do we need a cooling system for lithium-ion battery pack?

The stable operation of lithium-ion battery pack with suitable temperature peak and uniformity during high discharge rate and long operating cycles at high ambient temperature is a challenging and burning issue, and the new integrated cooling system with PCM and liquid cooling needs to be developed urgently.

How to ensure stable operation of lithium-ion battery under high ambient temperature?

To ensure the stable operation of lithium-ion battery under high ambient temperature with high discharge rate and long operating cycles, the phase change material (PCM) cooling with advantage in latent heat absorption and liquid cooling with advantage in heat removal are utilized and coupling optimized in this work.

How does temperature affect lithium ion batteries?

As rechargeable batteries, lithium-ion batteries serve as power sources in various application systems. Temperature, as a critical factor, significantly impacts on the performance of lithium-ion batteries and also limits the application of lithium-ion batteries. Moreover, different temperature conditions result in different adverse effects.

How does liquid cooling affect lithium-ion battery performance?

Guo et al. (43) evaluated the thermal performance of lithium-ion battery modules under liquid cooling conditions, concluding that increasing the flow channel area and coolant mass flow rate significantly reduces peak temperatures and temperature differences during charge and discharge cycles.
