Solar-diesel-storage microgrid solar container energy storage system

Overview

What is a solar storage system?

The storage system ensures grid stability and can store excess solar energy, resulting in a higher renewable energy penetration rate for this type of microgrid. However, the cost and return on investment are lower than TYPE A.

Can a solar-storage-diesel microgrid be used as a temporary power source?

When used as a temporary power source for construction sites, the solar-storage-diesel microgrid system can not only take advantage of peak-valley electricity price differences but also work with distributed photovoltaic power generation to achieve dynamic regulation of building electricity consumption.

What is a solar-storage-diesel integrated system?

The basic configuration of the solar-storage-diesel integrated system includes a microgrid-integrated machine, distributed photovoltaic power generation components, and a microgrid management platform. The microgrid-integrated machine has a rated charge/discharge power of 30KW and 60KW, with a long-term overload capability of 110%.

How does a microgrid Solar System work?

It employs a hybrid AC/DC three-bus architecture, combining distributed power sources, digital intelligent distribution networks, layered energy storage devices, and short-term grid-connected/off-grid technology. Through a microgrid solar-storage integrated cabinet, the system achieves a reliable and stable temporary power supply.
