Solar panels destroy the roof

Overview

When installed correctly, solar panels do not damage roofs. In fact, they can provide added protection from UV rays, hail, and extreme weather. Can solar panels damage a roof?

Fortunately, roof damage from a solar panel installation is extremely rare because installers take precautionary steps while installing panels to prevent leaks and other damage. Like any home improvement project, using the right service provider is essential to a rooftop solar job.

What happened to rooftop solar panels?

In 2013, a fire broke out at a 300,000 square foot meat warehouse in Delanco, New Jersey. Rooftop solar panels were present. Firefighters reported that the panels caused them to change tactics while fighting the fire. The building was eventually destroyed after 29 hours. Firefighter's opinion: 'Do I think we'd have had a different outcome if we could get on the roof?

Sure.'

How do I avoid solar on my roof?

Another option to avoid solar on your roof entirely is to install a ground mount or join a community solar plan and receive solar energy from an offsite location. A rooftop solar panel installation is a great investment that won't lead to roof damage when you work with a professional, experienced installer.

Do solar panels protect your roof?

On the sunny side of things (pun intended), solar panels protect your roof from sun damage over time. Sun rays and intense heat wear down your shingles, lighten their color, and make them more brittle over time. In contrast, solar panels thrive on sunlight. By covering your roof with the solar panels, you naturally protect the underlying shingles.

Solar panels destroy the roof
