# Solar panels need money

## Overview

---

Do solar panels save money?

If your roof needs repairs or gets a lot of shade, or if your electric bill is under \$100 a month, you may not see enough savings to justify the cost. Solar panel costs have drastically decreased over the last few decades, largely thanks to technological advancements and government incentives.

How much do solar panels cost?

Solar panels: The solar panels alone can cost between 80 cents to \$1.80 per watt, depending on the type, size and application. That's not including the cost of installation and of all the other equipment needed to get them producing energy and powering your home.

Are solar panels a good investment?

Pros: The energy produced by your solar system is free, and if your utility uses net metering, it credits you for any excess electricity that is added to the grid, helping you to break even more quickly on the project's cost. You may be able to get a loan to help pay for the costs of installing solar panels.

How do I save money on solar panels?

Evaluate local incentives and tax credits: Many states offer special government incentives for homeowners who install solar systems, such as rebates or property tax exemptions, that can reduce your costs significantly.
