Solar panels to battery storage system

Overview

Do solar panels have backup battery storage?

Solar panels with backup battery storage are nothing new: People have been using banks of lead-acid batteries to store solar power for decades. But those systems are bulky, require regular maintenance, rely on toxic and corrosive materials, and often must be housed in a separate, weatherproof structure.

How do solar batteries work?

Solar batteries work by taking the excess electricity produced by your solar power system and storing it for later use. When the solar panels produce more electricity than you are using, the excess generation is used to charge the battery.

Should you use home batteries to store solar energy?

If you have solar PV panels, or are planning to install them, then using home batteries to store electricity you've generated will help you to maximise the amount of renewable energy you use. Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills.
