What are the components of a solar panel?

The main component of a solar panel is a solar cell, which converts the Sun's energy to usable electrical energy. The most common form of solar panels involve crystalline silicon -type solar cells. These solar cells are formed using layers of elemental silicon and elements such as phosphorus and boron.

What are polycrystalline solar panels?

Polycrystalline solar panels are one of the oldest types of solar panel in existence, and now account for 0% of global production, according to the National Renewable Energy Laboratory (NREL). Their cells are made by melting multiple silicon crystals and combining them in a square mould.
