Solar power system powered by solar energy

Overview

What is solar energy?

Solar power is energy from the sun that is converted into thermal or electrical energy. Solar energy is the cleanest and most abundant renewable energy source available, and the U.S. has some of the richest solar resources in the world.

Where does solar energy come from?

Solar energy comes from the limitless power source that is the sun. It is a clean, inexpensive, renewable resource that can be harnessed virtually everywhere. Any point where sunlight hits the Earth's surface has the potential to generate solar power. Solar power is renewable by nature.

How does solar power work?

At its core, solar power is all about capturing the sun's energy and turning it into electricity. The process revolves around photovoltaic (PV) technology, which is used in solar panels to convert sunlight into electrical energy. Here's a simplified step-by-step look at how it all works: 1. Sunlight Hits Solar Panels.

What is a solar power system?

A solar power system is made up of a variety of components that turn sunlight into useful electricity. Photovoltaic (PV) panels are at the heart of any system, absorbing sunlight and converting it into direct current (DC) power.
