

BLINK SOLAR

Stockholm bifacial solar panel manufacturer

Overview

What are bifacial solar panels?

Bifacial solar panels (modules) have solar cells on both sides of the unit, with glass on the front and a clear fluoropolymer sheet on the back, allowing them to produce up to 25% more energy than the typical monofacial solar panel widely used today. Bifacial modules can be used with standard racking and inverters for any type of solar array.

Where are CIGS solar cells made?

Our solar cells are manufactured at our production facilities in Järfälla, Sweden, and Bari, Italy, using our proprietary DUO system, the world's most prevalent production system for flexible CIGS solar cells. After manufacturing, the solar cells are assembled into complete solar panels at the same locations.

Where are Midsummer solar cells made?

Midsummer's solar cells are a Swedish innovation and are manufactured both in Sweden and Italy. With a minimal weight of only 3kg per square meter, our solar cells enable installation on roofs with weight restrictions without compromising the structural integrity of the roof.

What is A Midsummer wave solar panel?

Midsummer WAVE is a solar panel that is placed on top of double-curved tiles from well-known manufacturers such as Benders (Palema), Monier (Jönåker), and S Eriks (Mjölby and Ekeby). These can be installed either during retrofitting or during a complete roof replacement.
