Supercapacitor energy storage microgrid

Overview

Higher-capacity lithium-ion batteries and higher-power supercapacitors (SCs) are considered ideal energy storage systems for direct current (DC) microgrids, and their energy management is critical. Are supercapacitors a good choice for a dc microgrid?

Supercapacitors have a high power density, rapid charge/discharge rates, and a long cycle life, making them the ideal energy storage choice for DC microgrids. They can help stabilize the DC microgrid by responding quickly to brief changes in power demand and supply.

How to improve microgrid operation stability and power supply quality?

In order to enhance the operation stability and power supply quality of microgrids, the application of energy storage systems is imperative. However, the single energy storage system cannot meet the development needs of the microgrid. Therefore, it is necessary to adopt a hybrid energy storage system (HESS) with more suitable performance [6].

What is a microgrid hybrid energy storage system?

The microgrid hybrid energy storage system has both the microgrid topology and the storage system while energy needs to be controlled, and its operation control strategy is suitable for the combination of the above two methods [16].

What is a battery-supercapacitor hybrid energy storage system?

The battery-supercapacitor hybrid energy storage system is considered to smooth the power fluctuation. A new model-free control method is utilized in the stand-alone photovoltaic DC-microgrid to provide the power to meet the demand load, while guaranteeing the DC bus voltage is stable.
