How to choose a rated power inverter?

If your electrical appliances consume a total of 1000 watts, such as fans and TV sets, then you need to purchase the inverter with rated power of 1000 watts or more. But if the electrical motor with the inductive load, choose the capacity of the inverter, it must consider the starting power of the electrical appliances.

What is an inverter & how does it work?

An inverter is an electronic appliance that powers your household during power outages. It stores electricity in its batteries and requires charging for efficient functioning. However, its main purpose is to convert DC power to AC, which is then transmitted to the domestic or commercial sectors.

How much power does an inverter need?

Most often the start up load of the appliance or power tool determines whether an inverter has the capability to power it. You would need an inverter with peak-surge rating greater than 1440 watts. [More Questions?](#)
