The price of bifaciality of solar modules

Overview

What are bifacial solar panels?

The bifacial solar panels allow infrared radiation to pass through the surface due to high transparency; the operating temperature of the bifacial solar panels is at least 10 °C less than the monofacial solar panels. Eight types of bifacial solar panels are being commercialized and available in the market.

What are the applications of bifacial solar cells?

The applications of bifacial solar cells are the same as conventional applications of monofacial counterparts, with at least a 35% increase in overall power production efficiency. Initial applications of bifacial solar cells include using as sun-shading elements with a set of parallel strings with bifacial cells .

Why do bifacial solar panels increase power conversion efficiency?

The increase in the bifacial silicon solar cells is due to the reduction in silicon wafer thickness and the increase in the transparency of the panels. Under better albedo and proper mounting angles, a typical bifacial solar panel is expected to show 50% more power conversion efficiency than the monofacial counterpart.

Are bifacial solar panels better than monofacial?

Under better albedo and proper mounting angles, a typical bifacial solar panel is expected to show 50% more power conversion efficiency than the monofacial counterpart. Bifacial silicon solar cells are monofacial cells with a back surface opened with a dielectric passivated layer, and a polymer back cover is replaced with a transparent sheet.

Bifacial Solar Panels: What are They and Are ...

Bifacial solar panels offer many advantages over monofacial solar PV modules. The panels are able to capture sunlight from both ...

 **Efficient Higher Revenue**

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPPT Trackers, 150% DC Input Oversizing
- Max. PV Input Current 16A, Compatible with High Power Modules

 **Intelligent Simple O&M**

- IP65 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

 **Flexible Abundant Configuration**

- Plug & Play, EPS Switching Under 30ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 units Inverters Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
