# **Two sets of batteries for solar energy storage**

## Overview

---

Which battery is best for solar energy storage?

Lithium-ion – particularly lithium iron phosphate (LFP) – batteries are considered the best type of batteries for residential solar energy storage currently on the market. However, if flow and saltwater batteries became compact and cost-effective enough for home use, they may likely replace lithium-ion as the best solar batteries.

What are solar battery storage systems?

Solar battery storage systems allow users to retain this excess energy and utilize it when needed, improving overall energy efficiency and reliability. These systems are particularly beneficial for off-grid locations, areas with unstable electricity grids, and homeowners looking to reduce their electricity bills.

What types of battery storage can be paired with solar?

by providing grid services. Two of the most common types of battery storage paired with solar are lithium-ion batter.

What type of battery should a solar system use?

Lithium-ion batteries are the most common type of battery used in residential solar systems, followed by lithium iron phosphate (LFP) and lead acid. Lithium-ion and LFP batteries last longer, require no maintenance, and boast a deeper depth of discharge (80-100%).
