# Uganda s largest energy storage power station

## Overview

---

Where is Uganda's largest hydropower plant located?

President Yoweri Museveni has officially inaugurated the Karuma hydropower plant, Uganda's largest power generation facility. Located on the Kyoga Nile River, about 270 kilometers north of Kampala, the plant has a capacity of 600MW, generated by six turbines.

What is Uganda's biggest power project?

The Karuma hydroelectric dam, upstream of Ayago and due to be completed early this year by China's Synohydro Corporation, is currently Uganda's largest power project. The ERA would also conduct its own due diligence on POWERCHINA International to ascertain whether it had the financial and technical capacity to execute the project, Wandera said.

What is Uganda's new power plant?

The new facility, inaugurated on 26 September 2024, boosts Uganda's power generation capacity from 1400MW to 2000MW, a significant step toward meeting the country's growing energy needs. The project, which began in 2016, has been a key component in Uganda's efforts to ensure a stable power supply for both domestic and industrial use.

How many substations does Uganda have?

As of the month of July 2024, Uganda's total grid length was marked at 4,496.4 km, with 42 substations and a transformation capacity of 6,945.5 MVA. Karuma is now the country's largest power installation and also stands as Africa's largest underground power plant.
