Vertical installation and price of solar panels

Overview

Do vertical solar panels cost more?

In contrast, vertical solar panel installations often incur higher upfront costs. This is due to the need for custom mounting solutions, particularly when panels are integrated into building façades, balcony railings, or bespoke structures like fences and external shading devices.

How much does a solar panel installation cost?

For example: A 4kW horizontal system on a pitched roof may cost around £6,000–£7,500, fully installed. Installation time is typically 1–2 days, depending on roof access and weather conditions. In contrast, vertical solar panel installations often incur higher upfront costs.

Can solar panels be installed vertically?

Research shows that panels installed at typical roof angles can generate over 90% of the optimal energy annually. However, vertical installation can also be effective in certain locations. For example, bifacial solar panels arranged vertically may perform better in specific climates.

Can hybrid solar panels be installed horizontal or vertical?

Yes, hybrid systems can be installed where some panels are mounted horizontally and others vertically to maximise space and output. Choosing between horizontal and vertical solar panel installations ultimately depends on your property type, energy goals, and aesthetic preferences.
