Weather station uses Cape Town folding container three-phase

Overview

How many weather stations are there in South Africa?

SAEON currently has 30 weather stations, 20 of which publish data that update every five minutes (depending on signal quality) and show weather conditions recorded in the last one to four weeks to live websites. These stations are located throughout the South African provinces in various biomes, as is shown by the above map.

What is the weather station data portal?

Welcome to the Weather Station Data Portal of the Western Cape Department of Agriculture. The Department of Agriculture collects weather data from a pool of weather stations all over the province for its own research purposes. The weather stations data is available at daily, hourly and monthly intervals.

How do weather stations work?

Our weather stations can measure temperature, humidity, rainfall, wind speed, wind direction and solar radiation. All our weather stations communicate through GPRS technology. Weather data is sent hourly to a central cloud server where the data is thoroughly checked by our quality system as in the examples below:.

Why should you use a weather station?

They are integral parts of forecasting and monitoring systems worldwide. Accurate measurements, low power requirements, and proven reliability in extreme weather conditions make our weather stations ideal for all types of meteorological and climatological monitoring anywhere on earth.

Data Loggers For Weather Monitoring
Weather Sensors
Data Retrieval Software
Our PC-based support software simplifies the entire weather monitoring process, from programming to data retrieval to data display and analysis. Our software automatically manages data retrieval from networks or single stations. Robust error-checking ensures data integrity. We can even help you post your data to the Internet.
