What are bifacial solar panels

Overview

How do bifacial solar panels work?

Bifacial solar panels have a glass panel on both the front and back sides, allowing them to capture sunlight from both sides of the panel, increasing their overall efficiency. Can solar panels be installed on a roof that is not facing south?

.

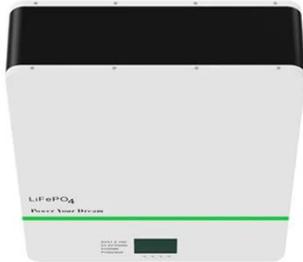

Are bifacial solar panels better?

As bifacial panels are covered both sides by tempered glass, they're often more durable. The extra surface area also means that bifacial panels perform better in diffuse light. Bifacial solar panels often come with a longer warranty of up to 30 years. Start your Journey towards green energy with WAAREE Solar. Inquire Now Bi-facial solar module.

What are bifacial solar cells?

Officially called bifacial solar cells, this technology soaks up shaded sunlight and artificial light from lamps and bulbs to produce its own trickle of renewable power. The technology builds on low-cost solar solutions that emerged in the 1990s, making sustainable energy possible in any indoor environment with light.
