Overview

What is Brazil's offshore wind potential?

Brazil holds a technical offshore wind potential of over 1,200 GW and – with offshore wind strategy and policies, permitting regulations, grid and port upgrades in place – could install as much as 96 GW of generation capacity by 2050, according to a study released by the World Bank Group.

Is offshore wind a viable option in Brazil?

Santiago Blanco, Executive Vice-President and Regional Director for Latin America, Energy Systems at DNV, commented, "This report highlights the immense potential of offshore wind in Brazil and provides guidelines for its development.

Can offshore wind power produce green hydrogen in Brazil?

Recent studies indicate that offshore wind potential in Brazil could exceed 1228 GW, providing a solid foundation for green hydrogen production. Pilot Projects and Strategic Partnerships: Brazilian and multinational companies have begun investing in pilot projects to integrate offshore wind energy with green hydrogen production.

How many offshore wind projects are there in Brazil?

As of July 2023, Brazil had around 189GW of offshore wind projects being evaluated by the federal environmental licensing agency, Ibama (see figure below). The regulatory framework for offshore wind projects in Brazil is still being developed, with the necessary regulatory apparatus needed to progress these projects yet to be put in place.
